The Importance of Planning for COVID-19 Vaccine Trials in Children

As the number of COVID-19 cases continues to rise, there is an urgent need for safe and effective COVID-19 vaccines. The latest research highlights include reports on early clinical data for several vaccine candidates, as well as other topics related to measuring the spread of the virus.

Join us for the next Global COVID Lab Meeting on July 30th at 10:00 am EDT with Dr. [Name] to discuss the latest findings and implications for vaccine development.

COVID-19 Vaccine Trials in Children

COVID-19 Vaccine trials have been implemented in children as early as [Year], following successful implementation in adults. In this webinar, we will discuss the planning and execution of COVID-19 vaccine trials in children, focusing on the importance of including children in vaccine trials to ensure the safety and efficacy of the vaccines in this population.

Dr. [Name] will present on the challenges and opportunities of vaccine trials in children, including the need for comprehensive systems to monitor adverse events and the importance of including children from diverse socioeconomic backgrounds.

In this webinar, we will also hear from Dr. [Name], who will discuss the role of vaccines in preventing the transmission of COVID-19 in children, and how vaccine trials in children can help inform the development of future vaccines.

Register now to join the webinar and learn more about the importance of planning for COVID-19 vaccine trials in children.
